UML Parser

This package contains a Java 1.8 UML Parser.

This parser parses the JAVA files and generates a UML Class diagram.

Dependency Management

Internet connection is **required** for fetching the Class diagram image.

How To Run The Project

Download the project folder from here.

Runnable_JAR folder will contain the runnable jar named "umlparser.jar".

Using command line navigate to location of jar or mention the path.

To run the project execute the command:

umlparser.jar <classpath> <output file name>

- <classpath> is the folder name where all the .java source files will be present.
- <output file name> is the name of the output image file that program will generate (.jpg or .png format)

Manual

Example of how to run the project:

umlparser.jar C:\Users\Sagar\workspace\javaToUML\src\main\java\Test_1 C:\Users\Sagar\Desktop\Test_1.jpg
